

NAME

map-update – update the format of a saved GMA map file

SYNOPSIS

(If using the full GMA core tool suite)

`gma go map-update file ...`

(Otherwise)

`map-update file ...`

DESCRIPTION

`Map-update` reads each *file* named on the command line and rewrites the file in the current map file format. A copy of the original is kept with the same name plus a `.bak` suffix.

The map file format changed significantly between format version 17 and 20. The `map-update` program can read format 17 files, so this provides a way to update existing map files to the newer format.

SEE ALSO

`gma(6)`, `mapper(5)`, `mapper(6)`.
