

**NAME**

map-update – update the format of a saved GMA map file

**SYNOPSIS**

(If using the full GMA core tool suite)

**gma go map-update** *file* ...

(Otherwise)

**map-update** *file* ...

**DESCRIPTION**

**Map-update** reads each *file* named on the command line and rewrites the file in the current map file format. A copy of the original is kept with the same name plus a **.bak** suffix.

The map file format changed significantly between format version 17 and 20. The **map-update** program can read format 17 files, so this provides a way to update existing map files to the newer format.

**SEE ALSO**
