

NAME

`upload-presets` – Upload die-roll presets to a GMA server

SYNOPSIS

(If using the full GMA core tool suite)

gma go upload-presets [*args* ...]

(Otherwise)

upload-presets **–endpoint** [*hostname*]:*port* [**–for** *username*] [**–pass** *password*] [**–replace**] [**–user** *username*] *file* ...

DESCRIPTION

Upload-presets connects to a GMA server and uploads the die-roll presets from one or more files, so they are stored in the server for use during game play.

The files must be in the format documented by **dice**(5), in either format version 1 or 2.

OPTIONS

The following options control the action of **upload-presets**.

–endpoint [*hostname*]:*port*

Connect to the server at the specified TCP port.

–for *username*

Store the presets for *username* instead of the user you are logged in as.

–pass *password*

Log in to the server with the specified *password*

–replace

Replace the user’s entire set of presets with the uploaded data. By default the uploaded presets will be added to any that already exist for that user.

–user *username*

Log in to the server with the specified *username* (default “**GM**”).

SEE ALSO

gma(6), **mapper**(5), **mapper**(6), **server**(6).
