NAME

map-update - update the format of a saved GMA map file

SYNOPSIS

```
(If using the full GMA core tool suite)
gma go map-update file ...
(Otherwise)
map-update file ...
```

DESCRIPTION

Map-update reads each *file* named on the command line and rewrites the file in the current map file format. A copy of the original is kept with the same name plus a .bak suffix.

The map file format changed significantly between format version 17 and 20. The map-update program can read format 17 files, so this provides a way to update existing map files to the newer format.

SEE ALSO

```
gma(6), mapper(5), mapper(6).
