NAME

upload-presets - Upload die-roll presets to a GMA server

SYNOPSIS

(If using the full GMA core tool suite)

```
gma go upload-presets [args ...]
```

(Otherwise)

upload-presets -endpoint [hostname]:port [-for username] [-pass password] [-replace] [-user username] file ...

DESCRIPTION

Upload-presets connects to a GMA server and uploads the die-roll presets from one or more files, so they are stored in the server for use during game play.

The files must be in the format documented by **dice**(5), in either format version 1 or 2.

OPTIONS

The following options control the action of **upload-presets**.

-endpoint [hostname]:port

Connect to the server at the specified TCP port.

-for username

Store the presets for *username* instead of the user you are logged in as.

-pass password

Log in to the server with the specified password

-replace

Replace the user's entire set of presets with the uploaded data. By default the uploaded presets will be added to any that already exist for that user.

-user username

Log in to the server with the specified *username* (default "GM").

SEE ALSO
