#### **NAME**

upload-presets – Upload die-roll presets to a GMA server

### **SYNOPSIS**

```
(If using the full GMA core tool suite)
```

```
gma go upload-presets [args ...]
```

(Otherwise)

**upload-presets -endpoint** [hostname]: port [**-for** username] [**-pass** password] [**-replace**] [**-user** username] file ...

## DESCRIPTION

**Upload-presets** connects to a GMA server and uploads the die-roll presets from one or more files, so they are stored in the server for use during game play.

The files must be in the format documented by **dice**(5), in either format version 1 or 2.

### **OPTIONS**

The following options control the action of **upload-presets**.

-endpoint [hostname]: port

Connect to the server at the specified TCP port.

**-for** username

Store the presets for *username* instead of the user you are logged in as.

-pass password

Log in to the server with the specified password

-replace

Replace the user's entire set of presets with the uploaded data. By default the uploaded presets will be added to any that already exist for that user.

-user username

Log in to the server with the specified username (default "GM").
